## Product Overview

### AR1335: 13 MP 1/3" CMOS Image Sensor

For complete documentation, see the data sheet.

The AR1335 is a 1/3.2-inch CMOS active-pixel digital image sensor with a pixel array of 4208H x 3120V. The AR1335 digital image sensor, features breakthrough 1.1  $\mu\text{m}$  pixel technology that delivers superior low-light image quality through leading sensitivity, quantum efficiency and linear full well. This allows image quality that rivals digital still cameras. With a sensor architecture focused on low power and a high Chief Ray Angle (CRA) for low Z-heights, the AR1335 is ideal for smartphone and other mobile device applications. It incorporates sophisticated on-chip camera functions such as windowing, mirroring, column and row skip modes, and snapshot mode. It is programmable through a simple two-wire serial interface. The AR1335 sensor can generate full resolution image at up to 30 frames per second (fps) and supports advanced video modes including 4K 30fps, 1080P 60fps and 720P 120fps.

## Application Diagram

- For connectivity above:
- Notes:
1. All power supplies should be adequately decoupled; recommended cap values are:
    - 2.7V: 1.0 $\mu$ F and 0.1 $\mu$ F
    - 1.2V: 1.0 $\mu$ F and 0.1 $\mu$ F
    - 1.8V: 1.0 $\mu$ F and 0.1 $\mu$ F
  2. Resistor value 1.5k $\Omega$  is recommended, but may be greater for slower two-wire speed.
  3. This pull-up resistor is not required if the controller drives a valid logic level on SCLK at all times.
  4. VAA and VAA\_PIX must be tied together.
  5. Internal charge pump is used for OTPM programming.
  6. Digital and MIPI supply can be tied together.
  7. ATEST1/ATEST2 must be left floating.
  8. TEST pin must be tied to DGND.
  9. VDD\_SLVS must be connected to DGND through a bypass cap (0.1 $\mu$ F).

## DF30 Series

### Extremely small size

40 positions shown

### Overview

Continuous miniaturization and increased component density on PCB created demand for extremely low profile connectors. This series is addition of a new extremely low profile connectors to Hirose's wide range of high reliability board-to-board/board-to-FPC connection solutions.

### Features

#### 1. Contact reliability

Concentration of the contact's normal forces at the single point assures good contact wipe and electrical reliability, while confirming the fully mated condition with a definite tactile click.

#### 2. Self alignment

Recognizing the difficulties of mating extremely small connectors in limited spaces the connectors will self align in horizontal axis within 0.3 mm.

#### 3. Automatic board placement

Packaged on tape-and-reel the plug and headers have sufficiently large flat areas to allow pick-up with vacuum nozzles of automatic placement equipment.

#### 4. Variety of contact positions and styles

Available in standard contact positions of: 20, 22, 24, 30, 34, 40, 50, 60, 70 and 80 with and without metal fittings. Addition of metal fittings does not affect external dimensions of the connectors.

Smaller contact positions are also available.

#### 5. Support for continuity test connector

Connectors which have increased insertion and removal durability are available for continuity tests. Contact your Hirose sales representative for details.

### Applications

Cellular phones, PDA's, mobile computers, digital cameras, digital video cameras, and other devices demanding high reliability connections in extremely limited spaces.
